For Immediate Release

Galil Offers New HelloGalil™ Quick-Start Projects for Windows-Based Programming Languages

Rocklin, CA., January 31, 2006—Galil Motion Control, the industry innovator in motion control, has developed HelloGalil, their new library of Quick-start projects for communicating between Galil motion controllers and PC programming languages. HelloGalil projects provide immediate communications with the controller using a programming language of choice, such as Visual Basic, Visual C#, Visual C++, Visual J#, Think & Do, InTouch, MATLAB, LabVIEW and more.

Available as a free, downloadable .zip file at http://galilmc.com/support/hello_galil.html, each HelloGalil “quick-start” project has a minimum of code to demonstrate communications to the controller.

Programmers will also find the following components in each HelloGalil project:

- All source files that comprise a complete working project
- A file that explains how the project was created from the very beginning
- A file that precisely shows what the running program should look like
- A working executable (where possible)

“Using HelloGalil quick start programs is simple and convenient,” says Lisa Wade, VP-Marketing and Sales. “HelloGalil instantly establishes communication with the controller, and users can then start to make progress on their motion control project. They can generate motion, determine if motion is complete, set and get I/O points, and query axis positions, variables, array elements, and more.”

For information about Galil’s HelloGalil Quick-Start Tool, or their line of motion controllers and drives, contact Lisa Wade, VP-Marketing and Sales, at Galil Motion Control, Inc.,

###

About Galil Motion Control, Inc.

Privately held and profitable for over 80 consecutive quarters, Galil Motion Control, Inc. was founded in 1983 by Jacob Tal and Wayne Baron. Galil became the first company to produce a microprocessor-based servo motor controller without tachometer feedback. Since then, Galil has continued to advance motion control technology and has found industry-leading acceptance with over 350,000 controllers successfully installed worldwide. Various applications include machines for the medical, semiconductor, machine tool, food processing, and textile industries. Recently, Galil has introduced several motion controllers for the Ethernet in addition to the latest generation Accelera controllers designed for ultra high-speed and performance.

Note: If you do not wish to receive news releases from Galil, or if there is someone else you feel is more appropriate, please let Al Bru, AB-Communications, know at 925-577-1719, or in a reply email at alfredbru@comcast.net
